

Quiz day 7

1. Extract the sequence (a_n) from the generating functions:

$$g(t) = \frac{1}{1-5t}, \quad g(t) = \frac{1}{1+3t}, \quad g(t) = \frac{t}{1+3t}.$$

2. Decompose the fraction into a sum of more simple fractions

$$g(t) = \frac{t+7}{(1-t)(1+3t)}.$$
